

*Ilex a. 'Hachzwerg'* PBR HECKENZWERG®

*Ilex aquifolium* Heckenzwerg is a broad growing compact, well branched shrub. The extremely glossy dark green leaves are 30 mm long and 8-10 mm wide, and have no sharp thorns along the edges. A ten year old Heckenzwerg is about 20" (50 cm) high and 24" (60 cm) wide. Heckenzwerg is hardy to -24°C.

EU applied for 2009/2393 'Hachzwerg'

*Ilex crenata* 'Golden Rock'

*Ilex crenata* 'Golden Rock' has a more compact and upright growth than 'Convexa' for example. The foliage of 'Golden Rock' is a nice dark green with conspicuous yellow spots. Some leaves are completely yellow. The leaves of 'Golden Rock' are flat and not convex like 'Convexa' has.

*Ilex*

The hardy *Ilex meserveae* 'Blue Euro' is a compact growing evergreen shrub. Its long spiky leaves are shiny green with a yellow center and combine beautifully with the red stems. Late August small green berries appear. Their color transforms to red, remaining on the shrub far into the spring.

EU applied for 2009/2585

*Ilex meserveae* 'Blue Euro'

*Ilex meserveae* 'Hachfee' PBR HECKENFEE®

*H*eckenfee has a thin upright and remarkably dense growth. The dark elegant green foliage has a nice deep gloss. In the early season deep red glossy berries of almost 1 cm appear. They contrast beautifully with the dark green foliage. *Ilex meserveae* Heckenfee is very hardy.

EU10063 'Hachfee'

*Ilex aquifolium* 'Red Tips'

*R*ed Tips is a specially selected form of *Ilex aquifolium*. 'Red Tips' branches off very good, has a strong growth and nice red shoots. The red shoots in combination with the variegated yellow leaves is a unique feature that is constantly expressed as the plant makes new shoots (3 to 4 times a year).

Besides that, the dark green leaf color contrasts sharply to its golden edge, which is visible throughout the year. 'Red Tips' is remarkably easy to be propagate by cuttings. The hardiness of 'Red Tips' so far has proved to be excellent.

EU applied for

*Ilex meserveae* 'Heckenpracht' has a bushy upright growth habit with dense branching. The young shoots have a remarkable bronze color, fading to bright green later in the season. The foliage is shiny and slightly serrated, without any sharp thorns. 'Heckenpracht' is very hardy.

EU7706

*Ilex meserveae* 'Heckenpracht'

*Ilex meserveae* 'Heckenstar'

*Ilex meserveae* 'Heckenstar' is an evergreen shrub with beautifully glossy, deep green serrated leaves that do not sting.

'Heckenstar' grows faster than 'Blue Prince', one of its parents, and has very dense branching. In a year it may grow 20 to 30" (50 to 80 cm). 'Heckenstar' is very hardy and can easily be grown as a hedge. Outside Europe 'Heckenstar' is known as Castle Wall™.
