**Syringa vulgaris 'Evert de Gier'**

PBR CARPE DIEM®

*Syringa vulgaris* Carpe Diem is a heavily branching upright growing shrub with beautifully fragrant flowers. The closed flower buds in the flower panicle of Carpe Diem are lilac. Opened up, the filled double flowers are white with a light blue pattern coming from the heart. The flowers have a sweet, breathtaking fragrance.

One of the parents of Carpe Diem is 'Beauty of Moscow'. It is a strong grower and it sprouts each year for a second time so it can already be propagated in its first year. Besides the heavy branching Carpe Diem also has a very strong root ball. This lilac is fully hardy.

---

**Syringa vulgaris 'Lila Wonder'**

*Lila Wonder* got its name because of the change in flower color when you come closer to the plant. From a distance, the flower panicles seem fully lilac, but up close the flowers appear to be bicolored: romantic soft lilac inside with a pure white border around it. The flowers stand close together, forming a beautiful filled panicle. The fragrance of 'Lila Wonder' is what you expect from a lilac; the most amazing fragrance from the plant kingdom. The beautiful heart-shaped leaves of 'Lila Wonder' are very healthy and emphasize the broad upright growth habit. 'Lila Wonder' is very hardy.
